

Stay hydrated

Our body consists of 75% water. We must hydrate every day to stay healthy. Drinking two to three litres of water per day is recommended, depending on body weight, season, and physical activity.

Be a friend of nature

Nature's Design bottles are made from 100 % natural materials which can be recycled or composted: glass, cork, wood, rubber, bioplastic and stainless steel. Water is a natural element and should be stored in natural materials, not plastic.

Be unique

All Nature's Design bottles are distinctive because of the cork sleeve. The Thank You Kids bottles come with watercolour pencils and stencils so your kids can personalize their bottle.

Say no to plastic bottles!

Each year enough plastic bottles are sold to circle the earth 26 times. Most plastic bottles are never recycled and end up in the oceans where they endanger sea life.

100 % GOOD FACTS

- ★ The cork sleeve protects the glass bottle from being damaged. It also provides insulation, allowing any drink to keep its temperature longer.
- ★ Any bottle part that is worn out or lost can be purchased individually. This extends the life of your Nature's Design bottle, without additional impact on the environment.
- ★ All of our products are made in Europe.

AWARDS

EU award for Sustainability

Best new product award at the biggest trade show for eco products in Germany
